

TECHNOLOGY INNOVATOR AWARDS 2016

Loop Energy Receives 2016 Innovation Award for Best Zero-Emission Transport Technology

VANCOUVER, June 7, 2016 – Loop Energy Inc. is pleased to announce that they have received an award for “Innovation in Green Technology” from Corporate Vision (CV) Magazine in recognition of its zero-emission transport technology. The winners will be formally announced in July 2016.

Loop Energy was recognized for its state-of-the-art fuel cell/battery powertrain, a better performing zero-emission engine for heavy-duty trucks. The Loop powertrain is ideally suited for urban freight applications – such as yard trucks and delivery trucks operating at commercial distribution centers and ports – as it delivers a commercially-competitive, emission-free solution in comparison to diesel or natural gas engines.

“We are honored to receive the CV 2016 Innovation in Green Technology Award,” said Ben Nyland, President of Loop Energy. “This underscores the progress we have made in the development of a cost-competitive, zero-emissions solution that will allow port operators and distribution centres to accelerate their ability to combat climate change and reduce the carbon output of their fleets. We share this award with our board, management leadership and employees who continue to be committed to our success.”

The CV Innovation Awards recognize the pioneering work of companies with ground-breaking technologies and developments that will fundamentally alter business-as-usual. As the corporate world evolves, the importance of technology and its role in the evolution of business is vital. The CV Technology Innovator Awards recognize and reward those companies behind the ground-breaking developments that change the way we do business for the better.

About Corporate Vision Magazine

Corporate Vision is an invaluable resource for CEOs, directors and leading investment professionals spanning an array of industries and sectors including technology, training and education, marketing, innovation and design, products and services, support services and strategy who want to improve and transform the way they manage their operations, staff, technology, business partnerships, and supply chains with a view to creating a more profitable and successful business. www.corp-vis.com

About Loop Energy

Loop Energy provides zero-emission power systems for heavy-duty transport. Loop works with freight owners to design and deliver carbon-free transportation solutions using both electric and hydrogen technologies. Loop powertrains deliver superior performance to conventional diesel engines at a competitive cost of ownership, without subsidies. For more information about how Loop Energy is driving the future of zero-emissions, visit www.loopenergy.com.
